

## ELTAC Lecture capture feedback from workshops/interviews

### *Specific feedback on forms:*

- Technicians need to work closely with academics regarding room set up
- Capture shouldn't be used without lecturer's agreement
- Suggest an expiry date agreed for captures that will be re-used
- Request clarity on capture of (permitted) copyright materials used in the lecture
- Would like to be able to edit captures (this is possible)
- Request roving camera
- Would like opportunities to practice in the classroom (Andy's 'free timetable slots' would answer this)

### *Informal feedback from discussions:*

- Concern about the restrictions/possible restrictions which would impact normal lecturing style. These include having to stand still; not using whiteboard/video/flip chart; limitations in using discussion or other activity within lecture.
- Feeling that the above may be regressive from t&l point of view and the lecturer as presenter rather than teacher is reinforced.
- Confusion about the formal 'ownership' of the captured lecture and IPR of the lecturer.
- Feeling that technology-led; need earlier consultation with academic staff to design rooms & make equipment decisions etc. although recognising there are technical and logistical limitations.
- General keenness to use the system and perception of its usefulness despite the above points.
